

NANO PROTECH

AFRICA DISTRIBUTOR— AKAM ORDER MANAGEMENT (PTY) LTD.

2017

SPORTS, OUTDOOR & ADVENTURE

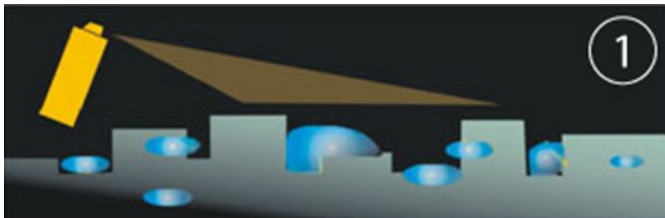

Product Technological Composition -

Nano Protech has a Nano-zeolite composition with a slightly oily consistency. The oily base is made up from a high mineral oil together with butane gas which is used to propel the product from the canister to the required surfaces.

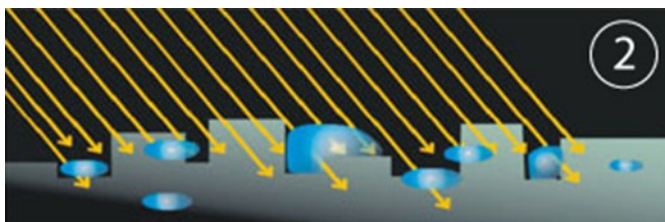

Product functionality -

After application, the coating penetrates underneath corrosion, rust and oxidation-prone surfaces as well as areas of humidity, binding these elements and forming a three dimensional multifunctional protective barrier network at the interface.

Nano-zeolite fills micro cavitation on a molecular level on all metal surfaces, circuit boards, micro circuitry, electric coils, etc. It's powerful capillary effect allows the product to penetrate inside the blocks without dismantling

The excellent water repellent properties together with low surface stress allows the thin protective coating to penetrate under the water / moist layers within seconds. This ensures that the product penetrates underneath all metal surfaces even on corroded areas and stops/seizes corrosion activity instantly.

“One application of Nano Protech Super Anti-corrosive will enhance your metal surfaces and equipment ‘s life span significantly. Nano coating will penetrate existing rust and instantly stop corrosion in its tracks.

Apply to: Brass, Aluminium, Stainless steel, Raw Iron, Zinc, Brazing Solder

RESISTANCE

- HEAT + 250°C
- COLD — 80°C
- VOLT + 1500v
- kVa + 256

NANO COATING PENETRATION

EASTERN CAPE (INCLUDING BORDER AND TRANSKEI DISTRIBUTOR) - NSA - Network and Security Africa

21A, 4th Avenue, Newton, Port Elizabeth, 6065, Phone: +27 (0)41 364 2915, P.O. Box 40047, Walmer, 6065, Fax: +27 (0)86 511 0911

Free from the following agents:

Polycyclic hydrocarbons

Fluorinated or chlorinated hydrocarbons

Resins

Silicones

Teflon

NANO PROTECH COMES IN PACK SIZE OF 120ml X 30 CANS

APPLICATION EXAMPLES

Before you set off on your adventure, ensure you apply Nano Protech Sports, Outdoor & Adventure to your Outdoor Gear.

)

NANO PROTECH CERTIFICATION

VARNISHES

CERAMICS

FABRICS

Applying Nano Protech to the target surface will result in 100% (one hundred percent) water and moist extrusion within 10 (ten) seconds. Correct application of Nano Protech on the target surface will ensure an intelligent and dynamic water repellent barrier at all time keeping it corrosion free for a minimum of 12 (twelve) months from application.

NANO PROTECH SUPER ANTI-CORROSIVE PENETRATION

Technical Spec—

Lubricant – Nano Protech Super Anti-corrosive is an excellent lubricant for all moving parts and metal mechanisms. Application on any metal surface will significantly reduce friction and wear for at least 12 (twelve) months from application. Nano Protech is “salt-spray” tested and resistant, however with surfaces continually exposed to salt water better protection will be obtained through frequent repeated coatings on target surfaces.

Surface Applications –

High Humidity environments for complete protection on the following:

Metal / Steel / Armor – Brass, Aluminum, Stainless steel, Raw Iron, Zinc and Brazing solder as well as vehicles’ moving parts, and all components normally affected by moist and corrosion. (Chassis, Armor plates, Bolts, Nuts, Screws, Frames, Handles, Locks, Wheels, Break drum outers, Chains, Sprockets, Steering Mechanisms, Gun Barrels, etc.)

Research equipment prone to moist and corrosion damage
Corrosion prone areas (all) – screws loosening

NANO PROTECH

SPORTS, OUTDOOR & ADVENTURE

Conclusion –

Nano Protech is the only long term protection for all metal surfaces against corrosion and rust. For complete protection on your Outdoor Adventure against moist and corrosion apply to metal, electrics, and electronics.

Nano Protech is a Global Brand.

Nano Protech is extremely powerful protection against moist.

Nano Protech is the only product that harnesses a vast field of protective agents in one single application and has no equal competitor.
